PROJECTS

ForeSee — AI-Assisted Deadline Risk Scheduler

June 2026

- Designed a rule-based risk engine computing a 0–100 deadline-failure score from five weighted factors: time pressure, workload gap, progress gap, user reliability, and task priority
- Built a behavioral-bias multiplier and a category-specific “Deadline DNA” adjustment derived from historical task-completion data to refine estimates
- Integrated Google Gemini 2.5 Flash to generate natural-language explanations of computed risk factors
- Built solo end-to-end with Next.js 16, React 19, and Tailwind CSS

C2G (Code2Git) — Chrome Extension for Automated DSA Tracking

June 2026

- Built a Chrome extension that automatically syncs a user’s accepted LeetCode submissions to GitHub, giving a unified history of solved DSA problems across platforms
- Intercepted successful submissions client-side via the Chrome webRequest API and retrieved source code and problem metadata through LeetCode’s GraphQL API
- Automated commits to GitHub via the GitHub REST API; built and maintained solo, in active regular use by multiple developers
